Pressure and Temperature

Pressure and Temperature information shown in this Product Catalogue is for guidance only. Pressures stated are generally based on the smaller sizes of each product and may reduce significantly for the larger sizes.

It is also a fundamental principle of valves and pipe work systems that if the temperature is increased then the pressure must be reduced. For exact pressure/temperature relationships we recommend that you check our product data sheets or consult our sales office. Although many of our valves are suitable for use at temperatures below freezing, it is necessary to take precautions to prevent the line fluid freezing and causing subsequent damage to the valve and pipe work system.

Options

Many of our valves can be supplied with alternative threads and flange drillings. We can also offer a wide range of paint options and coatings for non standard requirements and special applications.

We hold stock of standard products with the handle options shown in the Product Catalogue, we can however supply valves with different colour handles, Tee handles, stem extensions, and hand wheels, etc. We are also happy to quote for supply of specials to your exact requirements. Our standard range of actuated valves can also be fitted with extra limit switches, proximity switches, positioners, non standard solenoid valves, and manual over rides. If you require an actuator from a specific manufacturer we can usually provide a competitive quotation. If you have any unusual or non standard requirement please do not hesitate to contact our sales office.

Own Label Branding

A very popular additional service that we offer is to brand our products with your name and logo. Our standard Brass and Stainless Steel ball valves can be supplied with the handles printed to your own unique design, or with your customers' name and logo. All we ask is a one off contribution towards the initial costs of the design and artwork. A minimum order quantity of 10 pieces per design / ink colour applies. For further information please contact our sales office.

Approvals and Certification

Albion's commitment to quality is reflected by our operation of an independently assessed quality management system registered under ISO9001:2015.

We also operate an environmental and a health and safety management system that has been successfully assessed against the ISO14001:2015 and ISO45001:2018 standards. All applicable products conform to the Pressure Equipment Directive (PED) and where necessary are CE marked. Certain products also have specific approvals - EN331 approval for gas and WRAS approval for potable water. These items are indicated in the Product Catalogue. Many products also have other national approvals (ie DVGW, AGA, KIWA), please enquire if a specific approval is required. Test Certificates or Letters of Conformity are generally available for all products, please advise your requirements when placing orders.

For all product certificates please visit our website at www.albionvalvesuk.com/certs-approval
