

Albion Valves

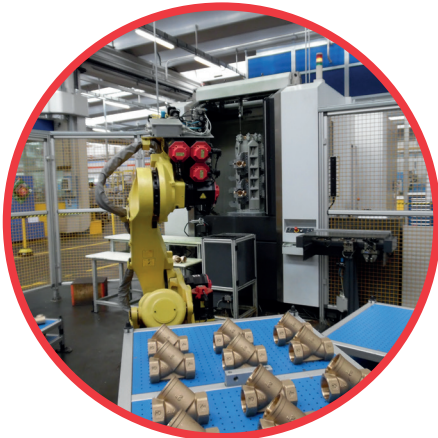

Company Profile

● It's all at Albion

PRV factory in Germany

Hydronic factory in Italy

Cast & Ductile Iron foundry in China

Actuated valves from the UK

Heritage

Albion Valves has been a trusted supplier to the UK's HVAC and industrial markets for over 25 years, and the Albion brand has been around for over 40 years within other UK markets! We are well-known for our expertise and experience in the UK, and have supplied many prestigious projects such as University College London Hospital (UCLH), Liverpool Training Academy and the London Olympic Village in the UK and the Burj Khalifa, The Pearl - Qatar, Oman Botanic Garden and the Viva Bahriya in the MENA region.

Quality

All of our valves are designed and manufactured in accordance with the relevant industry standards, therefore all threads comply with ISO 7/1, ISO 228/1 or ANSI B1.20.1, all raw materials are in accordance with EN 10204 and valves conform to the relevant British, European and International specification standards, for example, EN 1092 for flange connections and ISO 4144 for stainless steel fittings. After production, the valves are then subject to rigorous batch testing and are inspected by our own independent team for quality and compliance. Where appropriate, valves carry product approvals, such as, WRAS, EN331, EN161, ATEX, TMV2 and TMV3, this ensures we only supply reliable and quality products that deliver optimum performance. As a socially responsible company we are proud to conform to ISO 9001, ISO 14001 and ISO 45001.

Service

Having excellent customer service is a difficult claim to quantify, but having won numerous customer service awards for our performance, we can say it with complete confidence.

With dedicated departments for scheduling, quality and marketing, as well as sales teams based in the UK and throughout the MENA region, you can rest assured whatever it is you need, we are always on hand and happy to help.

Delivery

We know how important it is to have the right products on time every time, that is why we guarantee 95% stock availability at all times. Stock is held in the UK, the Jebel Ali Free Zone and various distributors are holding stock locally in the Middle East, this enables us to provide a next-day delivery service throughout the UK and keep lead times to a minimum throughout the MENA region.

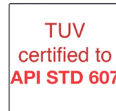

Choice

With over 5,000 valves and fittings suitable for the heating, air conditioning and plumbing markets we are able to supply a complete valve solution for any building services job from under one roof, and that's why we say 'It's all at Albion'.

"We know that time is money, and when a priority project depends on a valve, you can trust Albion to deliver."

David Keys - Managing Director

Tested to perform

BIM

Building Information Modelling (BIM) is becoming increasingly popular within construction sector projects due to the efficiency it provides. It allows for a system to be generated digitally from the early stages of the design, therefore saving time, pre-empting potential problems and reducing waste during installation.

To assist you with your future projects, we have created BIM components for our building services range, these are available for free download from www.albionvalvesuk.com or from the bimstore.

Case Studies

UCLH is a teaching hospital based in London. Albion supplied the new-build project with static and dynamic balancing valves, safety valves and a range of isolation valves, which form part of the hospital's HVAC systems.

High-rise commercial & residential buildings. Albion have supplied isolation and commissioning valves for many high-rise buildings worldwide, such as Canary Wharf and Sugar Quay in London; Collective 2 Tower and Traditional Souq in the UAE; WAVE Developing Housing Project and KAP2A in Saudi Arabia; and Queensbury and Park Inn in Sri Lanka.

Burj Khalifa is famously known as one of the world's tallest buildings, based in Dubai. Albion has supplied its On-Off and modulating actuated butterfly valves for the new ETS station, which is a part of the project to increase the cooling capacity.
