1. Introduction

Albion Valves (UK) Ltd ART 202 is a Pressure Independent Control Valve (PICV) which can be used to control the amount of fluid flowing through it whilst regulating the pressure differential.

Thanks to their unique design, PICV's can perform flow regulation, differential pressure control and modulation for comfort control and if required isolation.

Flow Regulation

When an electric actuator is not present or the plastic cap has been removed, the valve is normally open. But if the plastic cap is screwed on, or an electric actuator is installed, the spring forces the valve to close.

To achieve the design flow rate, the simple pre-setting scale on top of the valve is rotated to the required set point, which can be determined by using the flow tables below.

This pre-setting function has no impact on the stroke; the valve has full stroke modulation at all times.

The inlet water passes through a modulating control component whose geometry can be modified by turning the pre-setting dial to obtain the required flow rate for the branch of the system where the valve is installed.

Differential Pressure Control PICV maintains steady flow rate even when there are pressure fluctuations.

Modulation

When fitted with the ART AL202, the actuator performs the modulating function changing the section of flow passage.

It provides modulating control with 'full authority' regardless of any fluctuations in the differential pressure within the system the system.

When continuous modulation is carried out, the temperature is kept under control. ART 202 / AL202 keeps the same obturator stroke, regardless of the presetting dial position.

With continuous modulation, control is excellent even with small flow openings and this eliminates the on/off effect.

The ART 202 valve design with 3 P/T plugs, allows for both flow measurement and verification of minimum differential pressure across the total valve for aiding optimal pump energy saving.

Constant flow is obtained through the valve, despite pressure fluctuations.

By simply measuring differential pressure across the valve, the flow through the cartridge is obtained as follows;

- If measured differential pressure is above Δp min (start-up pressure), the flow rate is the same as the one stated on the valve table (function) of the pre-set;
- If measured differential pressure is below minimum Δp stated on valve table, flow rate is calculated using the following formula:

$$Q = K_{vs} \frac{\sqrt{\Delta p}}{r}$$

Where:

Q is the flow rate in m³/h,

R is the relative density,

Δp is the pressure drop across the valve;

K_{vs} – K_v across the valve when it is fully open

The constant differential pressure across the modulating control component guarantees the 100% authority, within the range up to a maximum differential pressure of 800 kPa.

2. Technical Data

Valve Type	Size Range	Connection Type	Temperature Rating	Pressure Rating (Max)
ART 202 PN16	DN50 to DN300	EN 1092-2	0 °C to 120 °C	PN16

Size	DN50	DN65	DN80	DN100	DN125	DN150	DN200	DN250	DN300

kvs	39.1	54.3	75.4	178	223	277	409	748	746

*Δp Range kPa when fully open (Pre-set 4.0)

Albion ART 202 has been tested in accordance with the BSRIA document BTS.1 ‘Test Method for Pressure Independent Control Valves’.

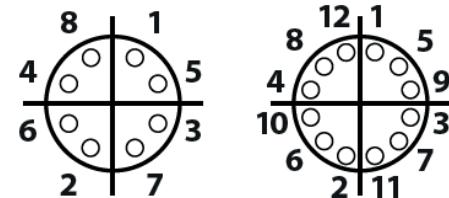

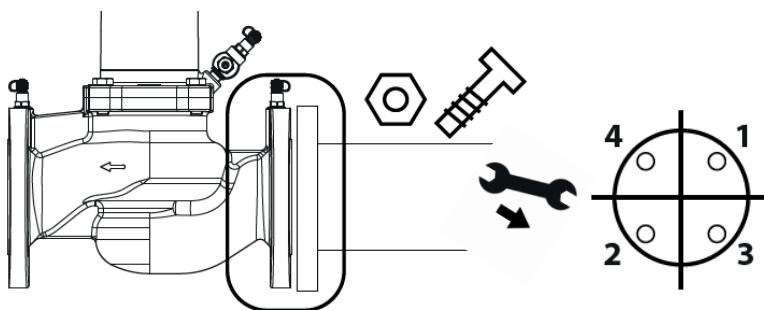

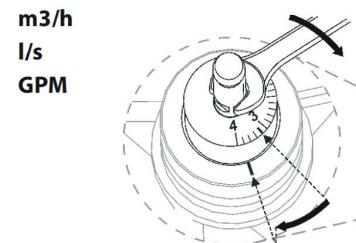

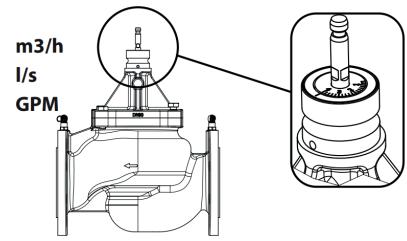

The valve is capable of closing against a maximum differential pressure of 800 kPa (8 bar) with a leakage rate at maximum 0.01 % of max rated volumetric flow and comply to EN1349 Class IV. The KV-values accuracy follows the BS 7350 standard for flow measurement devices for heating and chilled water systems.

3. Valve Features

- The ART 202 valve design with 3 P/T plugs allows for both flow measurement and verification of minimum differential pressure across the total valve.
- Measurement of flow and minimum differential pressure due to valve design with 3 P/T plugs.
- The constant differential pressure across the modulating control component guarantees 100% authority.
- Differential pressure operating range up to 800kPa.
- Higher presetting precision due to stepless analogue scale.

4. Valve Installation

- No minimum straight pipe lengths required before or after the valve.
- The ART 202 can be flushed and commissioned before the actuator is installed.
- The presetting of the dial is user-friendly requiring only a simple flow vs. presetting table.
- Once the flow is set, the actuator can be mounted and the valve ready to operate.
- The arrow on the valve dictates the direction of flow.
- Can be mounted on both flow and return lines.
- Do not mount upside down.
- Please also refer to Albion's Bolt Tightening Sequence document prior to install.

Close off Pressure

The ART 202 is capable of closing against the following differential pressure to EN 1349 Class IV:

DN50 to DN125: 800 kPa - based on 800N actuator force

DN150 to DN200: 800 kPa - based on 1100 N actuator force

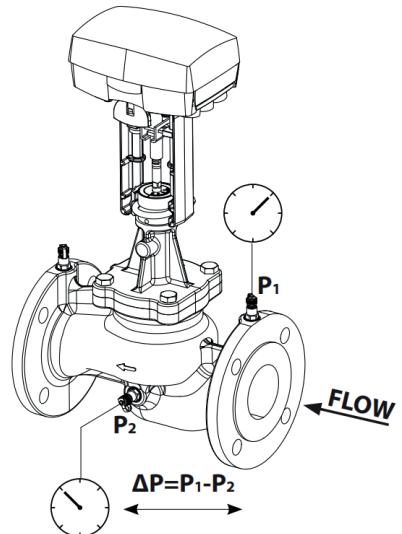

DN250 to DN300: 800 kPa - based on 2000 N acctuator force

Flow measurement

To measure the flow, insert the needles from a manometer in the red P/T plug (P1) and in the blue P/T plug (P2) placed at the middle of the valve body.

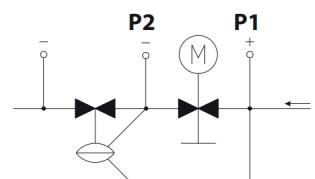

Now the manometer measures the differential pressure (P1-P2) across the KV presetting and the flow can be calculated by the formulas below.

Please use the KV-signal values detailed later in this document.

Flow Calculation

$Q = Kv \cdot \sqrt{\Delta p}$	$Q = m^3/h$ $\Delta p = \text{Bar}$
$Q = Kv \cdot 100 \cdot \sqrt{\Delta p}$	$Q = l/h$ $\Delta p = \text{kPa}$
$Q = \frac{Kv}{36} \cdot \sqrt{\Delta p}$	$Q = l/s$ $\Delta p = \text{kPa}$

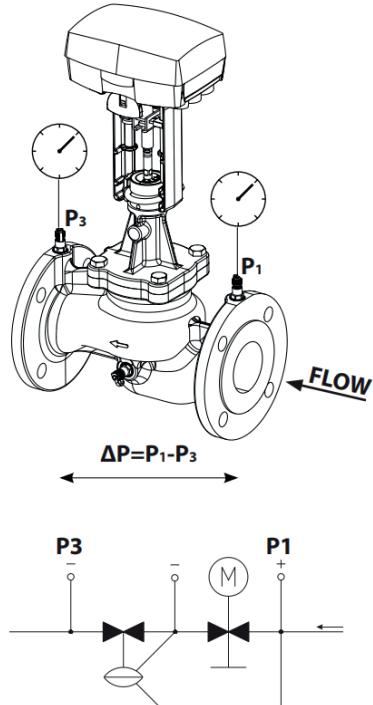

Minimum ΔP measurement

To measure the minimum differential pressure, insert the needles from a manometer in the red P/T plug (P1) and in the blue P/T plug (P3) placed at the outlet flange.

Now the manometer measures the differential pressure (P1-P3) across the total valve and the pump pressure can be optimised for pump energy saving.

Please use the required minimum differential pressure for the nominal flow detailed later in this document.

5. Flow Rates

DN	Series	Type	Flow (m³/h)
DN50	Standard	Low Flow	2.5 - 15.0
		High Flow	3.9 - 24.0
DN65	Standard	Low Flow	4.4 - 25.0
		High Flow	5.9 - 35.0
DN80	Standard	Low Flow	5.3 - 34.0
		High Flow	7.0 - 43.0
DN100	Standard	Low Flow	12.1 - 68.0
		High Flow	14.8 - 90.0
DN125	Standard	Low Flow	18.5 - 110
		High Flow	23.0 - 135
DN150	Standard	Low Flow	25.6 - 148
		High Flow	32.0 - 195
DN200	Standard	Low Flow	95.0 - 210
		High Flow	130 - 280
DN250	Standard	Low Flow	190 - 475
		High Flow	245 - 600
DN300	Standard	Low Flow	190 - 475
		High Flow	245 - 600

										6 60 s, 0% *	300 s, 50% *	Running time (Security function*)
										7 Normal	Inverted	Direction of movement
										8 Linear	EQ%	Valve characteristic
										9 Operation	Calibration	Operation/End position calibration

* DN40-50 actuator versions only

There are nine switches in a row on the circuit board. On delivery ('Factory'), all switches are pre-set as above.

1 Valve Closing Direction — IN / OUT

IN direction of movement is used when the screw of the actuator moves inwards to close the valve. OUT direction of movement is used when the screw of the actuator moves outwards to close the valve.

For ART 202 valves, ensure this switch is always 'ON'

2 Control signal — MOD / INC

Actuator can either be controlled by a variable direct voltage, known as a modulating signal (MOD), or by a 3-pos. floating signal (INC).

3 Sequence or parallel control — --- / SEQ

With sequence (or parallel) control (SEQ), two actuators/valves can be controlled by only one control signal.

For each of these you can choose which part of the voltage range to use, the upper one, 5-10 V (6-10 V) or the lower one, 0-5 V (2-6 V).

If the switch NORM / INV is in the NORM position, the higher voltage corresponds to 100% flow and the lower one to 0%. With NORM / INV in the INV position you will get the opposite function.

Note! If sequence or parallel control is not used, the switch --- / SEQ must be in the OFF position, as the

switch MOD / INC is not valid during sequence or parallel control.

4 Voltage range — 0-10 / 2-10

You can choose whether to use the control signal voltage range 0-10 V or 2-10 V.

5 Part of voltage range — 0-5, 2-6 / 5-10, 6-10

You can choose which part of a voltage range to use, the lower one 0-5 V (2-6 V) or the upper one 5-10 V (6-10 V).

If the switch is in the NORM position, the higher voltage corresponds to 100% flow and the lower one to 0%. To achieve the opposite function, the switch should be put in its INV position.

6a Running time — 60 s / 300 s

With 3-point floating control, you can choose a running time between 60 s or 300 s.

With modulating control, the running time is always 15 s / 20 s / 30 s (or 60 s, for DN40-50 actuator versions only).

6b Security function 0% / 50% (DN40-50 actuator versions only)

At 2-10 V control signal you can select which security function you want the actuator to have.

If the actuator is used for heating control and switch 6 is ON (50%), the actuator will open the valve halfway if the control signal disappears, e.g. if the X1 connection is unplugged.

If, instead, you want the valve closed, set switch 6 to OFF (0%).

Note! The direction of movement is also significant. See the following description.

7 Direction of movement — NORM / INV

Actuators direction of movement according to the control signal. In normal 'NORM' mode the actuator directly follows the control signal and closes the valve downwards against a 0V control signal.

In inverse 'INV' mode, the actuator reverses the direction of travel against the control signal and will open the valve upwards against a 0V control signal.

8 Linearization — LIN / EQ%

The total valve characteristics can be modified from linear to EQ%.

9 End position adjustment — OP / ADJ

This switch is only used to calibrate the end positions when the actuator is commissioned. Momentarily put the switch in the ON position. The actuator will automatically find the end positions of the valve. For normal operation the switch must be OFF

Standard Actuator

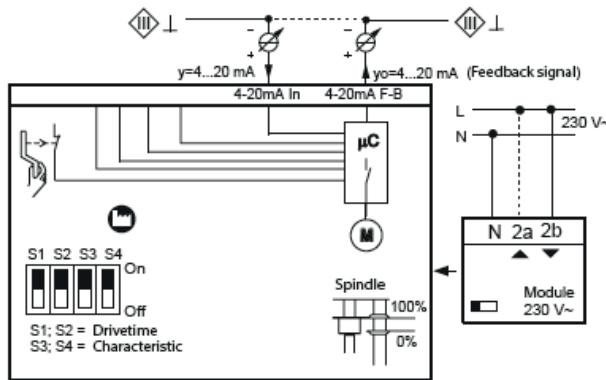

Standard Actuator

Standard Actuator

230 V AC

4-20 mA connection - Please note: The 4-20 mA control and feedback signal must have power supply

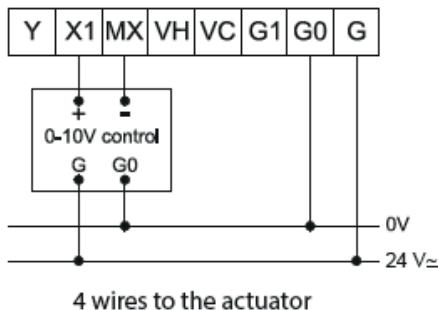

The feedback signal is calibrated from factory. But if necessary, the feedback signal can be fine tuned by the potentiometers on the feedback Module.

It is recommended to start with open valve and adjust the 4 mA-value by the **GAIN**-potentiometer.

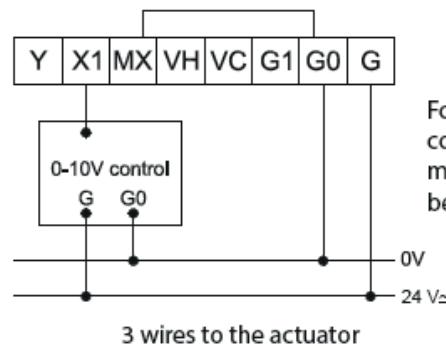

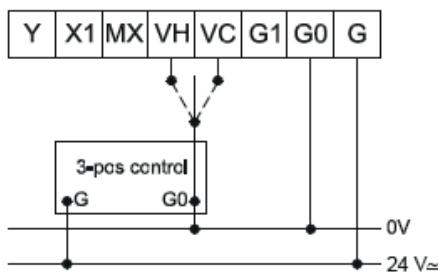

Then the valve can be closed and the 20 mA-value can be adjusted by the **OFFSET**-potentiometer.

NORM		300 s	6 60 s	300 s	Running time (Floating control only)
LIN		INV	7 Normal	Inverted	Direction of movement
OP		EQ%	8 Linear	EQ%	Valve characteristic
		ADJ	9 Operation	Calibration	Operation/End position calibration

There are nine switches in a row on the circuit board.
On delivery ('Factory'), all switches are in OFF" position.

1 Feedback signal

Select between 2-10V and 0-5V feedback voltage output .

2 Control signal — PROP/FLOAT

Actuator can either be controlled by a variable direct voltage, known as a proportional modulating signal (PROP), or by a 3-point floating signal (FLOAT).

3 Sequence or parallel control — --- / SEQ

With sequence (or parallel) control (SEQ), two actuators/valves can be controlled by only one control signal.

For each of these you can choose which part of the voltage range to use, the upper one, 5-10 V (6-10 V) or the lower one, 0-5 V (2-6 V).

If the switch NORM / INV is in the NORM position, the higher voltage corresponds to 100% flow and the lower one to 0%. With NORM / INV in the INV position you will get the opposite function.

Note! If sequence or parallel control is not used, the switch --- / SEQ must be in the OFF position, as the switch MOD / INC is not valid during sequence or parallel control.

4 Voltage range – 0-10 / 2-10

You can choose whether to use the control signal voltage range 0-10 V or 2-10 V.

5 Part of voltage range – 0-5, 2-6 / 5-10, 6-10

You can choose which part of a voltage range to use, the lower one 0-5 V (2-6 V) or the upper one 5-10 V (6-10 V).

If the switch is in the NORM position, the higher voltage corresponds to 100% flow and the lower one to 0%. To achieve the opposite function, the switch should be put in its INV position.

6a Running time – 60 s / 300 s

With 3-point floating control, you can choose a running time between 60 s or 300 s.

With modulating control, the running time is 20 s.

7 Direction of movement – NORM / INV

Actuators direction of movement according to the control signal. In normal ‘NORM’ mode the actuator directly follows the control signal and closes the valve downwards against a 0V control signal.

In inverse ‘INV’ mode, the actuator reverses the direction of travel against the control signal and will open the valve upwards against a 0V control signal.

8 Linearization – LIN /EQ%

The total valve characteristics can be modified from linear to EQ%.

9 End position adjustment – OP / ADJ

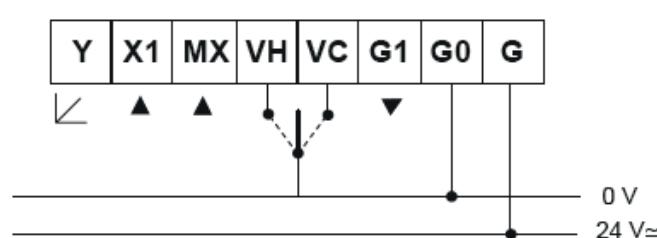

This switch is only used to adjust the end positions when the actuator is commissioned.

Momentarily put the switch in the ON position. The actuator will automatically find the end positions of the valve.

Stroke calibration will only be initiated once power is applied to the actuator and the user has triggered this switch.

9. Approvals Classification

- The valve is classified in accordance with PED 2014/68/EU as Sound Engineering Practice (SEP), EMC (Electro Magnetic Compatibility) Directive 2004/108/EC and Low Voltage Directive 2006/95/EC.

10. Troubleshooting

- If any maintenance is to be undertaken on the valve it is the responsibility of the installer to ensure the system is adequately drained and depressurized.
- A full risk assessment should be undertaken prior to any works taking place.

11. Warranty

- For further details of Albion Valves (UK) Ltd warranty period, please refer to Albion Valves (UK) Ltd 'Conditions of Sale' available on our website.

About Albion Valves (UK) Ltd

Albion has been supplying valves and fittings to the building services and industrial markets for the past 40 years.

Albion was created with the sole purpose of providing quality products at an affordable price. With a growing reputation for quality and reliability, Albion is now an established brand providing the industry with a trusted alternative to premium-priced products.

Our commitment to setting the highest standards in all areas of our business means, if you're looking for quality, service, delivery and choice — you'll find it's all at Albion.

Quality

Whatever you need, you can rest assured that if it comes from Albion it has been designed and manufactured to deliver optimum performance and is accredited with the necessary approvals. Our in-house quality department are always on hand too!

Service

We pride ourselves on our customer service – we have even won awards for it! Our cradle to grave approach means you will never be on your own!

Delivery

We know that time is money, and when a priority project depends on a part you can trust Albion to deliver – next day for all orders placed before 4:00PM.

Choice

We may have started out with a single brass ball valve, but our range has grown substantially since and we now consider ourselves to be a 'One Stop Shop' with our comprehensive range. It is becoming more and more apparent to the industry, that it really is all at Albion.
